

Simplifying Healthcare – The Interoperable Solution Suite for IDNs, ACOs and other At-Risk Provider Organizations

SES DIRECT - Connecting all Healthcare Stakeholders

SES Direct offers a fast path to successful use of Direct secure messaging. Scalable and easy to implement, Direct can be integrated with any healthcare application, including EHR/EMR systems, patient portals, clinical data repositories (CDRs) patient health applications and practice management systems.

SES FETCH - Securely Transmitting Data to Solve Clinical Exchange Challenges

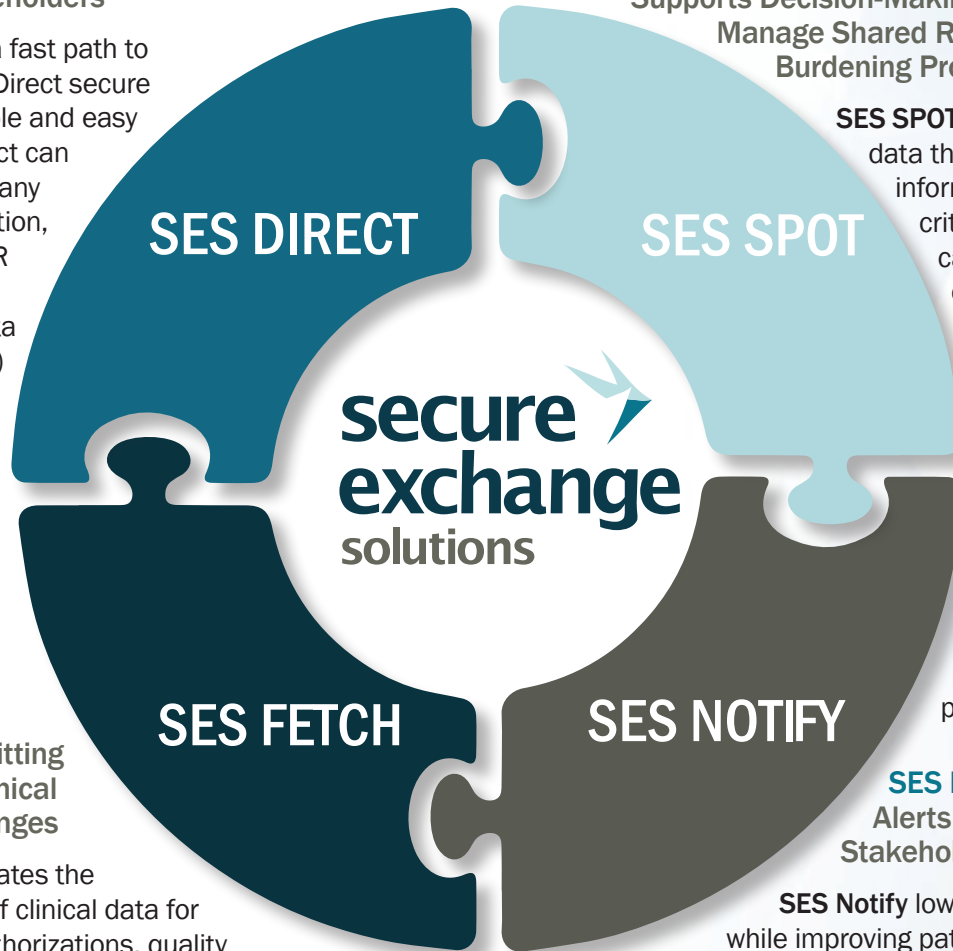

SES FETCH automates the secure exchange of clinical data for electronic prior authorizations, quality and care management, claim attachments, medical review and performance management programs. By transmitting data through the DIRECT secure messaging protocol, FETCH leverages existing EMR technology investments, making it cost effective for providers to implement.

SES SPOT - AI Based Clinical Record Review, Supports Decision-Making and Helps Manage Shared Risk without Burdening Providers

SES SPOT gives providers the data they need to make informed decisions at critical points in the care cycle – without compromising the physician/patient interaction or care quality. SPOT is integrated into the physician ordering workflow and provides feedback to support staff to streamline authorization and manage provider risk.

SES NOTIFY - Real-time Alerts Between all Stakeholders to Inform Care

SES Notify lowers healthcare costs while improving patient care. As the solution of choice for Hospitals, ACOs and payers, Notify delivers real time alerts for all stakeholders. Notify has proven to improve outcomes, decrease readmissions, improve follow-up care, boost patient engagement and satisfaction... all while significantly reducing inefficiencies and cost.

The platform of choice for over 1,500 hospitals, 350,000 providers and 60 million patients.
